FUNCTIONS

 	FUNCTIONS
<u>§§</u>	Cartesian product :
!	The cartesian product of two sets A and B is $A \times B = \{(x,y): x \in A, y \in B\}$
<u>§§</u>	Relation :
	Any subset of $A \times B$ is called a relation from A to B.
	The number of relations from A to B is $2^{n(A).n(B)}$
<u>§§</u>	Function :
	Let $f: A \rightarrow B$ be a relation then it is called a function or mapping from A to B, if every
eler	ment in A has unique image in B.
<u>§§</u>	<u>Domain, codomain, Range :</u>
	Let $f: A \rightarrow B$ be a function then A is called the domain and B is called the co-domain of the
i func	
	The set of images of the domain A is called the range of f. The range of a function denoted $\vec{r}(A)$ ($r=R$)
DYI	(A) (\subseteq B) The number of functions from A to B is {n(B)} ^{n(A)}
i	
	The number of relations from A to B which are not functions is $2^{\{n(A),n(B)\}} - \{n(B)\}^{n(A)}$
<u>§§</u>	One-one function (Injection), Many-one function
İ	A function $f: A \rightarrow B$ is one-one (or injective) if distinct elements of A have distinct images in
B. A	function which is not one-one is called many-one.
	Let $n(A) = r$ and $n(B) = n$. Then the condition to define an injection from A to B is $r \le n$
and	the number of such injections is ${}^{n}P_{r}$.
!	If $r > n$ then the number of injections is 0.
 <u>§§</u>	On to function (Surjection), In to function :
<u>مم</u> 	$f: A \rightarrow B$ is called an onto or a surjection if every element of B has at least one pre-imag in
A.	
	If $f: A \rightarrow B$ is onto (a surjection) then the range of f is B. i.e., $f(A) = B$.
1	If $f: A \rightarrow B$ is not onto then it is called an into function.
ļ	The condition for a function $f: A \rightarrow B$ to be a surjection from A to B is $n(A) \ge n(B)$.
	If $n(A) = n(\ge 2)$, $n(B) = 2$ then the number of on-to functions from A to B = 2 ⁿ - 2.
1	The number of surjections from A to B is
İ	$(-1)^{n-1} n C$
	$n^{r} - {}^{n}C_{1}(n-1)^{r} + {}^{n}C_{2}(n-2)^{r} - {}^{n}C_{3}(n-3)^{r} + \dots + (-1)^{r} + C_{n-1}$
	Where $n(A) = r$ and $n(B) = n$
<u>§§</u>	Bijection :
	A function which is one-one and onto is called a one-one onto or a bijection.
	If $f: A \rightarrow B$ is a bijective function then $n(A) = n(B)$
İ	If $n(A) = n(B) = n$, then the number of injection (or surjection or bijections) from A to B is n!.
1	If $n(A) \neq n(B)$ then the number of bijections is 0.
1

<u>§§</u> **Types of functions :** i) **Constant function :** A function f: $A \rightarrow B$ is a constant function if the range of f contains only one element. The number of constant functions from A to B is n(B). **Equality of Funtions :** ii) Two functions f(x) and g(x) are equal iff (a) the domain of f is the domain of g and (b) f(x) = g(x) for all the elements of domain iii) **Identity function :** Let A be a non - empty set then $f: A \rightarrow A$ defined by $f(x) = x \forall x \in A$ is called the identity function on A and it is denoted by I_{4} . iv) Inverse function : If f: A \rightarrow B is a bijection then f^{-1} : B \rightarrow A defined by $f^{-1}(x) = y \Leftrightarrow f(y) = x, \forall x \in B, y \in A$ is called the inverse of f. If the inverse of a function exists, then it is said to be invertible. The inverse of a function, if it exists, is unique. **Composite function :** V) If $f: A \rightarrow B$ and $g: B \rightarrow C$ are functions then $gof: A \rightarrow C$ is defined by $(gof)(x) = g\{f(x)\} \forall x \in A \text{ is called the composite function of } f \& g$. **¶** Properties of composite function : If $f: A \rightarrow B$, $g: B \rightarrow C$ are one-one then gof : $A \rightarrow C$ is also one-one. a) If $f: A \rightarrow B$, $g: B \rightarrow C$ are onto then $gof: A \rightarrow C$ is also onto. b) If $f: A \to B$ and $g: B \to C$ are bijections then $gof: A \to C$ is a bijection c) $\&(gof)^{-1} = f^{-1}og^{-1}.$ If gof: $A \rightarrow C$ is one-one then f is one-one d) If $gof: A \rightarrow C$ is onto then g is onto. e) If $f: A \to B$ is a function then $foI_A = I_B of = f$ f) If $f: A \to B$ is a bijection then $fof^{-1} = I_{R}, f^{-1}of = I_{A}$ g) If $f: A \to B$ and $g: B \to A$ are functions such that $gof = I_A$ and $fog = I_B$ then h) $f: A \rightarrow B$ is a bijection and $g = f^{-1}$. If $f: A \to A$ is a bijection then $fof^{-1} = f^{-1}of = I_A$ i) $fog \neq gof$ in general. If $f: A \rightarrow B$, $g: B \rightarrow C$ and $h: C \rightarrow D$ are functions then ho(gof)=(hog)of. i) **Real valued function :** vi) If the range of $f \subset R$ then f is a real - valued function. $(a.f+b.g)(x)=a.f(x)+b.g(x), x \in A \cap B; a, b \in R$

vii) <u>Algebr</u>	a of real valued function :
Let f :	$A \rightarrow R \& g : B \rightarrow R$ then
(i) $(f \pm g$	$g(x) = f(x) \pm g(x) \forall x \in A \cap B$
(ii)(fg)	$(x) = f(x).g(x) \forall x \in A \cap B$
$\left \begin{array}{c} \\ \\ \\ \\ \\ \end{array} \right \qquad \text{(iii)} \left(\frac{f}{g} \right)$	$\Big) (x) = \frac{f(x)}{g(x)}, \forall x \in A \cap B \& g(x) \neq 0$
(iv) $(f +$	$(k+k)(x) = f(x) + k, k \in \mathbb{R}$
$(\mathbf{v}) \ (kf)$	$(x) = kf(x), k \in \mathbb{R}$
$ $ (vi) f^n	$(x) = \{f(x)\}^n, n > 0$
(vii) $ f $	$(x) = f(x) , x \in A$
	odd function :
$\begin{array}{c} I \\ I \end{array} f: A \to I \end{array}$	R,A \subseteq R and $f(-x) = f(x) \forall x \in A$ then f is an even function.
	$R,A \subseteq R$ and
f(-x)	$=-f(x)$ $\forall x \in A$ then f is an odd function.
∣ <u>¶</u> Importa	ant points of odd and even functions :
l a)	The graph of an odd function is symmetric about origin.
b)	The graph of an even function is symmetric about Y-axis.
c)	A function which is even or odd, when squared becomes even function.
d)	The derivative of an odd function is an even function and derivative of an even
function is an	
e)	Every function can be expressed as the sum of an even and an odd function.i.e.,
$\int f(x) = \frac{1}{2} \{f(x)\}$	$(+f(-x))$ + $\frac{1}{2}$ { $f(x)-f(-x)$ } = {even function} + {odd function}
f)	A function may neither be even nor odd.
g)	f(x) = 0 is the only function which is defined on the entire number line is even
and odd at the	e same time.
h)	Every even function y = f(x) is not one-one $\forall x \in D_f$.
i)	If f and g both are even or both are odd then the function f.g will be even but if
any one of the	em is odd then f.g will be odd.
a) Even or od	Id extension : if $f(x)$ is defined for $x > 0$, $f(x)$ can be made even by re-defining it as
	by redefining it as -f(x) for x< 0
ix) <u>Polynoi</u>	mial function :
If <i>f</i> : <i>A</i> –	$\rightarrow R$, A \subseteq R is defined by f(x)= $a_0 x^n + a_1 x^{n-1} + a_2 x^{n-2} + + a_{n-1} x + a_n$,
$a_0 \neq 0, a_1, a_2$.	$a_n \in R$, n is a non-negative integer is a polynomial function of degree n.
I I	

-	
x)	Rational function :
 	A function of the form $\frac{f(x)}{g(x)}$ where f(x) and g(x) are polynomial functions and $g(x) \neq 0$ is
	called a rational function.
 xi)	Algebraic function :
 	A function obtained by a finite number of algebraic operations (addition, subtraction, multiplication, division, root extraction) on polynomial function is called an algebraic function.
¦ xii)	Explicit & Implicit functions :
i I	A function $f(x, y) = 0$ is said to the an explicit function if it expressed as $y = f(x)$ otherwise it is called an implicit function.
xiii)	Exponential function :
	If $a \in R$, a>0 then $f(x)=a^x$ is called an exponential function.
xiv)	Logarithmic function :
1	If $a \in R$, $a > 0$, $a^{1} 1$ then $f(x) = \log_{a} x$ is called a logarithmic function
xv)	Step function(Greatest integer function) :
	If x is any real number then there exist integers n and n+1 such that $n \le x < n+1$. Then the
i integ	ral part of x is defined as n. It is denoted by $[x]$.
1	perties of greatest integer function :
	(i) If $f(x) = [x + n]$, where $n \in I$ and [.] denotes the greatest integer function, then
f(x) =	= n +[x]
i	(ii) $x = [x] + \{x\}$, [.] denote the integral and $\{.\}$ fractional part of x respectively
	(iii) $x - 1 < [x] \le x$ (iv) $[-x] = -[x]$, if $x \in I$
	(v) $[-x] = -[x] - 1$, if $x \notin I$
	(vi) [x] – [−x] = 2n - 1, if n - 1 < x < n, <i>n</i> ∈ <i>I</i>
İ	(vii) $[x] - [-x] = 2n + 1$, if $x = n + \{x\}$, $n \in I$
	(viii) $[x + y] \ge [x] + [y]$.
 XV I)	Modulus function(Absolute value function) :
	The absolute value or numerical value or the modulus of real number x, denoted by $ x $,
je do	fined as
1	$\begin{bmatrix} -x & if & x < 0 \end{bmatrix}$

$$|x| = \begin{cases} -x & if & x < 0\\ 0 & if & x = 0\\ x & if & x > 0 \end{cases}$$

Thus we have $|x| \ge 0$ and |-x| = |x|

<u>¶</u> Properties of modulus function

(i)
$$|x| \le a \Longrightarrow -a \le x \le a; (a \ge 0)$$

(ii)
$$|x| \ge a \Longrightarrow x \le -a \text{ and } x \ge a; (a \ge 0)$$

L

(iii) $|x+y| = |x|+|y| \Leftrightarrow x \ge 0$ and $y \ge 0$ or $x \le 0$ and $y \le 0$ (iV) $|x-y| = |x|-|y| \Rightarrow x \ge 0$ and $|x| \ge |y|$ or $x \le 0$ and $|y| \le |y|$ (v) $|x \pm y| \le |x| + |y|$ (vi) $|x \pm y| \ge |x| - |y|$ <u>§§</u> **Signum Function :** The signum function f is defined as $sgn(x) = \begin{cases} \frac{|x|}{x} \text{ or } \frac{x}{|x|}; & x \neq 0\\ 0; & x = 0 \end{cases}$ <u>§§</u> **Periodic function :** A function f(x) is said to be periodic function if, there exists a positive real number T, such that, $f(x + T) = f(x), \ \forall x \in R.$ [-a,a] (-a,a) Then, f(x) is periodic with period T, where T is least positive value. **Function** Range $\sqrt{a^2-x^2}$ [0,a] $\frac{1}{\sqrt{a^2 - x^2}}$ $\left[\frac{1}{a},\infty\right)$ $\sqrt{x^2-a^2}$ $[0,\infty)$ $\frac{1}{\sqrt{x^2 - a^2}}$ $(-\infty,-a)\cup(a,\infty)$ $(0,\infty)$ a^x , $(a>0, a \neq A)$ $(-\infty,\infty)$ $(0,\infty)$ e× $(-\infty,\infty)$ **(**0,∞ **)** $\log_a x$ (0,∞) $(-\infty,\infty)$ $(a > 0, a \neq 1)$ |x| $(-\infty,\infty)$ **[**0,∞**)** $(-\infty,\infty)$ Ζ [X] $\{x\} = x - [x]$ $(-\infty,\infty)$ [0,A) \sqrt{x} **[**0, ∞ **) [**0, ∞ **)** $(-\infty,\infty)$ [-1,1] $\sin x$ $\cos x$ $(-\infty,\infty)$ [-1,1] $R - \left\{ (2n+1)\frac{\pi}{2} : n \in Z \right\}$ $(-\infty,\infty)$ tan x $R-\left\{n\pi:n\in Z\right\}$ $(-\infty, -1] \cup [1, \infty)$ cosec x
