

WS-5

Task

①

$$\text{Displacement} = 4\hat{i} + 3\hat{j}$$

$$\begin{aligned} |\text{Displacement}| &= \sqrt{4^2 + 3^2} = \sqrt{16+9} \\ &= \sqrt{25} = 5 \text{ km NE} \end{aligned}$$

②

$$\text{Velocity of a train} = 120 \text{ kmph} = 120 \times \frac{5}{18}$$

$$\text{Time} = 30 \text{ sec}$$

$$\text{Distance} = \text{Velocity} \times \text{time}$$

$$= 120 \times \frac{5}{18} \times 30 = 1000 \text{ m}$$

③

$$\text{Initial speed } u = 30 \text{ kmph}$$

$$\text{Final speed } v = 60 \text{ kmph}$$

$$\text{Time } t = 10 \text{ sec}$$

$$\begin{aligned} \text{change in velocity} &= v - u = 60 - 30 = 30 \text{ kmph} \\ &= 30 \times \frac{5}{18} = \frac{25}{3} \text{ m/s} \end{aligned}$$

$$\therefore \text{Acceleration} = \frac{\text{change in velocity}}{\text{time}} = \frac{\frac{25}{3}}{\frac{10}{3}} = \frac{25}{30} = \frac{5}{6}$$

$$= 0.833 \text{ m/s}^2$$

④

$$\text{Distance} = 30 \text{ m}$$

$$\text{time} = 0.2 \text{ sec}$$

$$\text{velocity} = \frac{\text{displacement}}{\text{time}} = \frac{30}{0.2} = \frac{300}{2} = 150 \text{ m/s}$$

⑤

$$\text{Velocity of train} = 5 \text{ kmph} = 5 \times \frac{5}{18} \text{ m/s}$$

$$\text{Distance travelled} = 600 \text{ m} [500 + 100]$$

$$\begin{aligned} \text{time taken} &= \frac{\text{Distance}}{\text{velocity}} = \frac{600 \text{ m} \times 18}{25} \\ &= 432 \text{ sec} \end{aligned}$$

⑥

$$\text{velocity } u = 400 \text{ km/s} ; \text{ time} = 10 \text{ sec}$$

$$v = 600 \text{ km/sec}$$

$$\text{From } v = u + at \Rightarrow 600 = 400 + a \times 10$$

$$\Rightarrow a = 20 \text{ m/s}^2$$

$$\text{From } s_1 = ut + \frac{1}{2} at^2$$

$$\begin{aligned} &= 400 \times 10 + \frac{1}{2} \times 20 \times (10)^2 \\ &= 4000 + 10 \times 100 \\ &= 5000 \text{ km} \end{aligned}$$

$$\begin{aligned} \text{Distance covered in next } 50 \text{ sec is } s_2 &= u \times \text{time} \\ &= 600 \times 50 \\ &= 30000 \end{aligned}$$

$$\begin{aligned} \text{Total distance} &= s_1 + s_2 = 5000 + 30000 \\ &= 35000 \text{ km} \end{aligned}$$

(2)

(7)

$$\text{time} = 2 \text{ min} = 120 \text{ sec}$$

$$\text{velocity} = 330 \text{ m/s.}$$

$$\text{distance} = \text{velocity} \times \text{time}$$

$$= 330 \times 120$$

$$= 39600 = 39.6 \text{ km}$$

(8)

$$\text{initial velocity } u = 50 \text{ kmph} = 50 \times \frac{5}{18} \text{ m/sec}$$

$$\text{time} = 32 \text{ sec} ; a = 0.5 \text{ m/s}^2$$

$$\text{From } v = u + at$$

$$\Rightarrow u = 50 \times \frac{5}{18} + 0.5 \times 32$$

$$\Rightarrow u = \frac{250}{18} + 16 = 13.7 + 16 = 29.7 \text{ m/s.}$$

(16)

$$\text{From graph acceleration} = \frac{v}{t} = \text{slope of graph}$$

$$= \frac{20}{10} = 2 \text{ m/s}^2.$$

(14), (15), (16)

$$\text{distance} = 9 \text{ km.}$$

$$\text{velocity} = 18 \text{ kmph.}$$

$$\text{Time} = \frac{\text{distance}}{\text{velocity}} = \frac{9}{18} = \frac{1}{2} \text{ hr.}$$

(15)

continuation

$$\text{distance} = 9 \text{ km}$$

$$\text{velocity} = 15 \text{ kmph}$$

$$\text{Time taken} = \frac{\text{distance}}{\text{velocity}} = \frac{9}{15} = \frac{3}{5} \text{ hr.}$$

(16)

$$\text{Total time} = \frac{1}{2} + \frac{3}{5} = \frac{5+6}{10} = \frac{11}{10} \text{ hrs}$$

(17)

$$\text{Given radius} = 0.5 \text{ m}$$

$$\text{For one rotation distance} = 2\pi r.$$

$$\text{For 14 rotations} = 2\pi r \times 14$$

$$= 2 \times 22 \times 0.5 \times 14$$

$$\Rightarrow 14\pi$$

(18)

$$\text{distance} = 210 \text{ km}$$

$$\text{speed} = 70 \text{ kmph}$$

$$\text{time} = \frac{\text{distance}}{\text{speed}} = \frac{210}{70} = 3 \text{ hrs}$$

(19)

$$\text{distance } d_1 = 60 \text{ km} \quad ; \quad d_2 = 100 \text{ km}$$

$$\text{time } t_1 = 30 \text{ min}$$

$$t_2 = ?$$

$$\frac{d_1}{t_1} = \frac{d_2}{t_2} \Rightarrow \frac{60}{30} = \frac{100}{t_2}$$

$$\Rightarrow \frac{60}{30} = \frac{100}{t_2} \Rightarrow t_2 = 50 \text{ min}$$

L Taylor

(3)

For main level

(1)

$$\therefore \text{displacement} = 45 \text{ m.}$$

(2)

$$\text{Displacement} = \text{Final position} - \text{Initial position}$$

$$= C - A$$

$$= 50 \text{ m}$$

(4)

$$\text{distance} = 20 \text{ km} ; \text{ time} = 4 \text{ hrs}$$

$$\text{speed} = \frac{\text{distance}}{\text{time}} = \frac{20}{4} = 5 \text{ kmph}$$

(5)

After 5 sec the body reaches to point of Projection so displacement = 0

(6)

$$\text{velocity} = 200.5 \text{ m/s} = \text{constant.}$$

$$\therefore \text{acceleration} = \frac{\text{change in velocity}}{\text{time}} = \frac{0}{t} = 0 \text{ m/s}^2$$

(7)

$$\vec{v}_{res} = 10\hat{i} + 10\hat{j} \Rightarrow |\vec{v}_{res}| = \sqrt{10^2 + 10^2} = 10\sqrt{2} \text{ m/s}$$

$$\therefore \text{Acceleration} = \frac{\vec{v}_{res}}{\text{time}} = \frac{10\sqrt{2}}{10} = \sqrt{2} \text{ m/s}^2$$

⑧

displacement = 40 km
= 40×10^3 m

9

As the rat reaches diametrically opposite Point

Displacement = $2R$

(16)

Total distance travelled = 3 + 4
= 7 km

④

Initial speed = 25 m/s ; Final speed (u) = 10 m/s

time = 5 sec

Then Retardation = -ve acceleration

$$= \frac{V - U}{h} = \frac{10 - 25}{5}$$

$$= -\frac{15}{5} = -3 \text{ m/s}^2$$

(18)

velocity = 36 kmph ; time = 10 sec.

$$\text{Acceleration} = \frac{\text{velocity}}{\text{time}} = \frac{\frac{36 \times 5}{10}}{18} = \frac{2 \times 5}{10} = 1 \text{ m/s}^2$$
